

Modernisme/funksjonalisme:

Le Corbusier, psevdonym for Charles Edouard Jeanneret (1887-1965), sveitsisk-fransk maler og arkitekt. Fra 1920-årene den desodert forgrunnsskikkelse i samtidens arkitekturen. Hans faglige utdannelse var basert på selvstudier og praksis som assistent hos Peter Behrens i Berlin og Auguste Perret i Paris, hvor han siden virket, til dels sammen med sin fetter Pierre Jeanneret. Allerede fra midten av 1920-årene markerte han seg ved en rekke radikalt nyskapende arbeider, særlig i og omkring Paris. De foretrukne materialer var jernbetong og glass, anvendt i kubiske komposisjoner, helt befridd for smykkende detaljer. I denne utformingen var funksjonalismen hovedvekten. Selve uttrykket for det rasjonelle kom derved til å spille en større rolle enn det hverdagelige praktiske. Blant hans større arbeider fra denne periode er Frelsesarmeens herberge (1929) og det sveitsiske studenthus (1931) i Paris. Et realisert bruddstykke av utopiske ideer er bl. a. den store boligblokken i Marseille (1952), som imidlertid bærer preg av en ny innstilling, bort fra det kubistiske og over på noe mer robust, komplisert og voldsomt skulpturalt. Det ytterst eiendommelige kapell i Ronchamps (1954) er helt befridd for alt som kalles rasjonalistisk, og det samme gjelder hans kloster i La Tourette (1960) og de offisielle bygninger i den nye by Chandigarh, Punjab, som han i sin helhet har planlagt. Le Corbusiers enestående posisjon bygger på en forening av analytisk talent, den sterkeste kunstneriske skaperevne og en sans for også å agitere for sine ideer på inntrengende måte i en lang rekke publikasjoner.

Modernisme/funksjonalisme

Centre Le Corbusier	(Modern, 1963-67)
Alexandra Road Housing, London	(Modern, urban, 1969)
